

Application No. 10/760,039

In the Abstract

Please substitute the following amended Abstract for the Abstract as currently pending (deleted matter is shown by strikethrough and added matter is shown by underlining):

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising: (a) a charge transport material having the formula

where  $R_1$ ,  $R_2$ ,  $R_3$ , and  $R_4$  comprise, each independently, an alkyl group, an alkenyl group, an aromatic group, a heterocyclic group, or a part of a ring group;  $X$  and  $X'$  comprise, each independently, an aromatic group;  $Y$  and  $Y'$  comprise, each independently, a (disubstituted)methylene group; and  $Z$  is a linking group; (b) a charge generating compound; and (c) an electrically conductive substrate on which said charge transport material and said charge generating compound are located. Corresponding electrophotographic apparatuses and imaging methods are also described.
